Contents

Preface **XI**

1 Introduction and survey **1**
1.1 Information, computers and quantum mechanics 1
1.1.1 Digital information 1
1.1.2 Moore's law 2
1.1.3 Emergence of quantum behavior 3
1.1.4 Energy dissipation in computers 4
1.2 Quantum computer basics 5
1.2.1 Quantum information 5
1.2.2 Quantum communication 6
1.2.3 Basics of quantum information processing 7
1.2.4 Decoherence 9
1.2.5 Implementation 9
1.3 History of quantum information processing 10
1.3.1 Initial ideas 10
1.3.2 Quantum algorithms 11
1.3.3 Implementations 12

2 Physics of computation **15**
2.1 Physical laws and information processing 15
2.1.1 Hardware representation 15
2.1.2 Quantum vs. classical information processing 16
2.2 Limitations on computer performance 17
2.2.1 Switching energy 17
2.2.2 Entropy generation and Maxwell's demon 18
2.2.3 Reversible logic 20
2.2.4 Reversible gates for universal computers 21
2.2.5 Processing speed 22
2.2.6 Storage density 23
2.3 The ultimate laptop 23
2.3.1 Processing speed 23
2.3.2 Maximum storage density 24

3 Elements of classical computer science **27**
3.1 Bits of history . . . 27
3.2 Boolean algebra and logic gates . . . 28
3.2.1 Bits and gates . . . 28
3.2.2 2-bit logic gates . . . 28
3.2.3 Minimum set of irreversible gates . . . 30
3.2.4 Minimum set of reversible gates . . . 31
3.2.5 The CNOT gate . . . 31
3.2.6 The Toffoli gate . . . 32
3.2.7 The Fredkin gate . . . 33
3.3 Universal computers . . . 33
3.3.1 The Turing machine . . . 33
3.3.2 The Church–Turing hypothesis . . . 34
3.4 Complexity and algorithms . . . 35
3.4.1 Complexity classes . . . 35
3.4.2 Hard and impossible problems . . . 36

4 Quantum mechanics **39**
4.1 General structure . . . 39
4.1.1 Spectral lines and stationary states . . . 39
4.1.2 Vectors in Hilbert space . . . 39
4.1.3 Operators in Hilbert space . . . 40
4.1.4 Dynamics and the Hamiltonian operator . . . 42
4.1.5 Measurements . . . 43
4.2 Quantum states . . . 44
4.2.1 The two-dimensional Hilbert space: qubits, spins, and photons . . . 44
4.2.2 Hamiltonian and evolution . . . 45
4.2.3 Two or more qubits . . . 47
4.2.4 Density operator . . . 48
4.2.5 Entanglement and mixing . . . 49
4.2.6 Quantification of entanglement . . . 50
4.2.7 Bloch sphere . . . 51
4.2.8 EPR correlations . . . 53
4.2.9 Bell's theorem . . . 54
4.2.10 Violation of Bell's inequality . . . 55
4.2.11 The no-cloning theorem . . . 56
4.3 Measurement revisited . . . 58
4.3.1 Quantum mechanical projection postulate . . . 58
4.3.2 The Copenhagen interpretation . . . 60
4.3.3 Von Neumann's model . . . 60

5 Quantum bits and quantum gates **63**
5.1 Single-qubit gates . . . 63
5.1.1 Introduction . . . 63
5.1.2 Rotations around coordinate axes . . . 63

5.1.3 General rotations . . . 64
5.1.4 Composite rotations . . . 65
5.2 Two-qubit gates . . . 66
5.2.1 Controlled gates . . . 66
5.2.2 Composite gates . . . 67
5.3 Universal sets of gates . . . 69
5.3.1 Choice of set . . . 69
5.3.2 Unitary operations . . . 69
5.3.3 Two qubit operations . . . 70
5.3.4 Approximating single-qubit gates . . . 71

6 Feynman's contribution **75**
6.1 Simulating physics with computers . . . 75
6.1.1 Discrete system representations . . . 75
6.1.2 Probabilistic simulations . . . 76
6.2 Quantum mechanical computers . . . 77
6.2.1 Simple gates . . . 77
6.2.2 Adder circuits . . . 77
6.2.3 Qubit raising and lowering operators . . . 78
6.2.4 Adder Hamiltonian . . . 80

7 Errors and decoherence **83**
7.1 Motivation . . . 83
7.1.1 Sources of error . . . 83
7.1.2 A counterstrategy . . . 84
7.2 Decoherence . . . 84
7.2.1 Phenomenology . . . 84
7.2.2 Semiclassical description . . . 85
7.2.3 Quantum mechanical model . . . 87
7.2.4 Entanglement and mixing . . . 88
7.3 Error correction . . . 90
7.3.1 Basics . . . 90
7.3.2 Classical error correction . . . 90
7.3.3 Quantum error correction . . . 91
7.3.4 Single spin-flip error . . . 92
7.3.5 Continuous phase errors . . . 93
7.3.6 General single qubit errors . . . 94
7.3.7 The quantum Zeno effect . . . 95
7.3.8 Stabilizer codes . . . 98
7.3.9 Fault-tolerant computing . . . 99
7.4 Avoiding errors . . . 100
7.4.1 Basics . . . 100
7.4.2 Decoherence-free subspaces . . . 101
7.4.3 NMR in Liquids . . . 102
7.4.4 Scaling considerations . . . 104

8 Tasks for quantum computers 105
8.1 Quantum versus classical algorithms . . . 105
8.1.1 Why Quantum? . . . 105
8.1.2 Classes of quantum algorithms . . . 106
8.2 The Deutsch algorithm: Looking at both sides of a coin at the same time . . . 107
8.2.1 Functions and their properties . . . 107
8.2.2 Example: one-qubit functions . . . 107
8.2.3 Evaluation . . . 108
8.2.4 Many qubits . . . 109
8.2.5 Extensions and generalizations . . . 111
8.3 The Shor algorithm: It's prime time . . . 111
8.3.1 Some number theory . . . 112
8.3.2 Factoring strategy . . . 113
8.3.3 The core of Shor's algorithm . . . 114
8.3.4 The quantum Fourier transform . . . 117
8.3.5 Gates for the QFT . . . 120
8.4 The Grover algorithm: Looking for a needle in a haystack . . . 121
8.4.1 Oracle functions . . . 122
8.4.2 The search algorithm . . . 123
8.4.3 Geometrical analysis . . . 124
8.4.4 Quantum counting . . . 126
8.4.5 Phase estimation . . . 126
8.5 Quantum simulations . . . 129
8.5.1 Potential and limitations . . . 129
8.5.2 Motivation . . . 129
8.5.3 Simulated evolution . . . 130
8.5.4 Implementations . . . 131

9 How to build a quantum computer 133
9.1 Components . . . 133
9.1.1 The network model . . . 133
9.1.2 Some existing and proposed implementations . . . 134
9.2 Requirements for quantum information processing hardware . . . 135
9.2.1 Qubits . . . 135
9.2.2 Initialization . . . 136
9.2.3 Decoherence time . . . 136
9.2.4 Quantum gates . . . 137
9.2.5 Readout . . . 138
9.3 Converting quantum to classical information . . . 139
9.3.1 Principle and strategies . . . 139
9.3.2 Example: Deutsch–Jozsa algorithm . . . 140
9.3.3 Effect of correlations . . . 141
9.3.4 Repeated measurements . . . 141
9.4 Alternatives to the network model . . . 142
9.4.1 Linear optics and measurements . . . 142

9.4.2 Quantum cellular automata . . . 143
9.4.3 One-way quantum computer . . . 143

10 Liquid state NMR quantum computer 145
10.1 Basics of NMR . . . 145
10.1.1 System and interactions . . . 145
10.1.2 Radio frequency field . . . 146
10.1.3 Rotating frame . . . 147
10.1.4 Equation of motion . . . 148
10.1.5 Evolution . . . 149
10.1.6 NMR signals . . . 150
10.1.7 Refocusing . . . 152
10.2 NMR as a molecular quantum computer . . . 154
10.2.1 Spins as qubits . . . 154
10.2.2 Coupled spin systems . . . 155
10.2.3 Pseudo / effective pure states . . . 156
10.2.4 Single-qubit gates . . . 158
10.2.5 Two-qubit gates . . . 159
10.2.6 Readout . . . 161
10.2.7 Readout in multi-spin systems . . . 162
10.2.8 Quantum state tomography . . . 164
10.2.9 DiVincenzo's criteria . . . 165
10.3 NMR Implementation of Shor's algorithm . . . 166
10.3.1 Qubit implementation . . . 166
10.3.2 Initialization . . . 167
10.3.3 Computation . . . 168
10.3.4 Readout . . . 169
10.3.5 Decoherence . . . 171

11 Ion trap quantum computers 173
11.1 Trapping ions . . . 173
11.1.1 Ions, traps and light . . . 173
11.1.2 Linear traps . . . 174
11.2 Interaction with light . . . 175
11.2.1 Optical transitions . . . 176
11.2.2 Motional effects . . . 176
11.2.3 Basics of laser cooling . . . 177
11.3 Quantum information processing with trapped ions . . . 179
11.3.1 Qubits . . . 179
11.3.2 Single-qubit gates . . . 181
11.3.3 Two-qubit gates . . . 182
11.3.4 Readout . . . 183
11.4 Experimental implementations . . . 185
11.4.1 Systems . . . 185
11.4.2 Some results . . . 185
11.4.3 Problems . . . 187

12 Solid state quantum computers **189**
12.1 Solid state NMR/EPR . . . 189
12.1.1 Scaling behavior of NMR quantum information processors . . . 189
12.1.2 ^{31}P in silicon . . . 190
12.1.3 Other proposals . . . 191
12.1.4 Single-spin readout . . . 192
12.2 Superconducting systems . . . 193
12.2.1 Charge qubits . . . 193
12.2.2 Flux qubits . . . 195
12.2.3 Gate operations . . . 196
12.2.4 Readout . . . 196
12.3 Semiconductor qubits . . . 197
12.3.1 Materials . . . 197
12.3.2 Excitons in quantum dots . . . 199
12.3.3 Electron spin qubits . . . 199

13 Quantum communication **201**
13.1 "Quantum only" tasks . . . 201
13.1.1 Quantum teleportation . . . 201
13.1.2 (Super-) Dense coding . . . 203
13.1.3 Quantum key distribution . . . 205
13.2 Information theory . . . 207
13.2.1 A few bits of classical information theory . . . 208
13.2.2 A few bits of quantum information theory . . . 214

Appendix

A Two spins-1/2: Singlet and triplet states **221**

B Symbols and abbreviations **223**

Bibliography **227**

Index **241**
